

# Auto Steering System Component

This is a component used in auto steering systems. It plays a crucial role in maintaining the vehicle's steering performance.

## Product Overview

### Professional Steering System Component

This high-quality auto steering system component is designed to ensure reliable power connectivity for industrial and automotive applications. Featuring a robust molded housing and standardized three-prong configuration, it is engineered for consistent performance and safety. It serves as an essential part for maintaining and repairing critical steering system electronic infrastructure.

## Technical Specifications

Model Identifier	SPA03
Connector Type	Three-pronged power plug
Grounding Included	Yes
Housing Material	Molded plastic

## Application

Compatible Applications	Steering Systems, Power Delivery, Industrial Equipment, Automotive Maintenance
