

Automated Assembly Line Component

This heavy-duty component is designed for automated assembly lines. It features a robust metal housing with internal mechanisms and hydraulic lines, suggesting a hydraulic actuation system.

Product Overview

Heavy-Duty Assembly Component

This automated assembly line component is engineered for durability and precision in industrial manufacturing environments. Featuring a robust, gray-painted metal housing and integrated hydraulic actuation systems, it is designed to withstand rigorous production demands. The unit includes a specialized hardened tip, making it ideal for high-impact or connection-critical assembly applications.

Technical Specifications

Actuation System

Hydraulic

Model Identifier

405-72 A02052

Construction Material

Heavy-duty metal housing

Typical Application

Automated Assembly, Production Line, Industrial Machinery
