Product Overview

High-Precision Bottling Solution

This automated bottling line is engineered specifically for the efficient processing of daily chemicals and various oils. It utilizes high-precision dynamic electronic scales at each filling station to ensure accurate, quantitative filling. Designed for high-volume operations, this system integrates seamless filling, capping, and labeling capabilities into a single, cohesive workflow.

Technical Capabilities

Key Automation Features

- Automatic Filling
- Automatic Capping
- Automatic Labeling
- Quantitative Filling Control

Filling Technology

Weighing Filler, Flowmeter Filler, Dynamic Electronic Scale

Application Suitability

Suitable Products

Daily Chemicals • Edible Oils • Detergents • Cleaning Agents

Typical Packaging Example

500 g

Standard Fill Weight
