

Automated Concrete Block Production Line

This automated system handles material mixing and the forming process. Its code plate system enables automatic batching, automatic molding, and automatic code plate functions.

System Overview

Automated Concrete Block Production Line

This comprehensive production line automates the entire concrete block manufacturing process, ensuring high efficiency and consistency. The system integrates raw material handling, precise batching and mixing, high-speed block molding, and automated stacking. Designed for professional operations, this line optimizes workflow from cement intake to the final curing phase.

System Components

System Components

- Cement Silo
- Screw Conveyor
- Cement Scale
- Loader
- Batching Machine
- Compulsory Mixer
- Belt Conveyor
- Block Making Machine
- Stacker
- Pull Cart
- Control Unit
- Curing Room

Automation Level

Fully Automated • Industrial Grade
