

Automated Egg Cracking and Separating Machine

The Egg Breaking Machine is a robust and efficient solution for high-volume egg processing. It features an automated system for cracking and separating eggshells from the liquid egg, minimizing manual handling and reducing the risk of contamination.

Overview

Automated Egg Processing Solution

This automated egg cracking and separating machine is designed to streamline high-volume egg processing for bakeries, food manufacturers, and commercial kitchens. By automating the washing, breaking, and separation process, it helps businesses establish a standardized production line while significantly reducing labor costs. Constructed from durable, food-grade stainless steel, the machine ensures high hygiene standards and minimal contamination risk.

Key Features

Design Benefits

Food Safety Compliant • Modular Design • Easy Maintenance

Material Construction

Stainless steel

Automation Capabilities

Washing, Breaking, Separating

Operational Metrics

Performance Metrics

1 System

Standardized Production Process

Adjustability

- Adjustable egg size settings
- Adjustable processing speeds
