

Automated Fabric Knitting Machine

This advanced textile machinery is designed for efficient and precise fabric production. It features multiple yarn feeders for creating complex patterns and color combinations.

Product Overview

High-Efficiency Fabric Production

The JP 8000 series is an advanced textile solution engineered for precision and consistency in fabric knitting. Featuring multiple yarn feeders, it enables the creation of complex patterns and diverse color combinations with ease. The integrated user-friendly control panel ensures seamless operation and real-time monitoring for high-quality output.

Technical Specifications

Model Identification	JP 8000
Series Code	FN-228
Key Features	Automated Knitting, Multi-Feeder System, Complex Patterning, Digital Control Panel

Operational Metrics
