

Automated Filling and Capping Machine

This automated machine fills and caps food, beverage, and cereal products. It features a stainless steel construction, rotary filling system, conveyor belt transport, and an integrated control panel.

Overview

High-Efficiency Automated Filling and Capping Solution

This automated filling and capping machine is engineered for high-volume production lines in the food, beverage, and cereal industries. Featuring a robust stainless steel construction and a precise rotary filling system, it ensures consistent output and secure sealing while adhering to strict hygiene standards. The integrated control panel allows for seamless operation, making it an essential asset for modern, efficient packaging facilities.

Technical Specifications

Key Operational Features

- Rotary filling system
- Conveyor belt transport
- Integrated control panel

Construction Material	Stainless Steel
-----------------------	-----------------

Application

Production Suitability

High-Volume • Hygienic Design

Target Industries	Food, Beverage, Cereal
-------------------	------------------------
