

Automated Glass Lid Cleaning Machine

This automated machine is designed for the efficient cleaning of glass lids. It utilizes a roller conveyor system to move lids through washing and drying sections, ensuring thorough cleaning.

Product Overview

Automated Glass Lid Cleaning Solution

The Automated Glass Lid Cleaning Machine is engineered for high-volume industrial glass lid processing. Utilizing a sophisticated roller conveyor system, it ensures continuous and smooth movement through integrated washing and drying stations. This design effectively removes watermarks and debris, delivering a pristine finish suitable for demanding production environments.

Technical Specifications

Construction Material	Stainless Steel
Cleaning Process	Automated, Washing, Drying

Operational Features

Application Suitability	High-Volume • Industrial Use
Conveyor System	Roller Conveyor
Control Interface	Adjustable Control Panel
