

Automated Granular Material Packaging System

This packaging machinery is designed for processing granular or powdered materials. It features a cylindrical design with a control panel and is suitable for food, chemical, or pharmaceutical applications.

Overview

High-Precision Automated Packaging

This automated packaging system is engineered for the efficient processing and filling of granular and powdered materials. Designed for industrial reliability, it features a robust blue metal support frame and a sophisticated control panel for precise operation. Its versatile design makes it suitable for demanding applications in sectors such as food production, chemical manufacturing, and pharmaceutical packaging.

Technical Specifications

Design Configuration	Cylindrical multi-section structure
Frame Construction	Reinforced blue metal frame
Control Interface	Digital Display, Automated Controls, Industrial Interface

Application

Compatible Materials

- Granular materials
- Powdered substances

Target Industries

Food Processing • Chemical Industry • Pharmaceutical
