

Automated Guided Vehicle Forklift Module

This automated guided vehicle (AGV) forklift module facilitates efficient and precise material transport. It is designed for integration with warehouse management systems to optimize material flow.

ADDITIONAL IMAGES

Product Overview

Intelligent Material Handling Solution

This Automated Guided Vehicle (AGV) forklift module is engineered for high-efficiency logistic sorting and industrial ground handling. Designed to optimize material flow, it supports seamless integration into intelligent warehouse environments and manufacturing assembly lines. Its robust construction ensures reliable performance for heavy-duty material transport tasks.

Application Areas

Suitable Industries

Construction Machinery Manufacturing, Automotive Assembly, Intelligent Warehousing, Electronic Equipment Manufacturing, Logistics & Sorting

Technical Capabilities

Core Functions

- Automated Ground Handling
- Logistic Sorting
- SPS Parts Delivery
- Warehouse Material Transport

System Integration

System Compatibility

- Convey & Deliver Systems
- Packing Machines
- Palletizer Robots
- Vertical Elevators
- Company Management Systems
