

Automated Lattice Girder Welding Machine

This automated welding machine is designed for lattice girders. It ensures accurate and consistent welds on various girder sizes, increasing production efficiency.

Product Overview

Automated Lattice Girder Welding

This specialized machine tool is engineered for the automated, high-volume production of lattice girders. Featuring a robust frame and advanced multi-wire welding systems, it ensures precise and consistent weld quality across various girder configurations. The integrated PLC control system allows for seamless management of welding parameters, significantly increasing production efficiency while reducing labor costs in demanding industrial environments.

Technical Specifications

Production Capacity

14 m Max Length	90 mm Max Base Width
---------------------------	--------------------------------

Supported Dimensions

- Length: 2-14m
- Base Width: 70-90mm

Model	SJL300T-18
--------------	------------

Performance & Control

Control System	Programmable Logic Controller (PLC)
Welding Features	Multi-wire welding, Automated wire feeding, Integrated cooling system, Simultaneous vertical/diagonal welding

Safety & Compliance

Safety Equipment
Emergency Stop • Protective Enclosures
