

# Automated Liquid Filling and Packaging Line

This automated system integrates multiple stations for liquid filling, sealing, and labeling. It is constructed from stainless steel and designed for high-volume production.

## Overview

### Automated Liquid Filling and Packaging Solution

This automated liquid filling and packaging line is engineered for high-volume production environments, streamlining the transition from raw liquid product to finished, packaged goods. The system integrates multiple critical stations, including multi-nozzle liquid filling, precision sealing or capping, and automated labeling. Constructed from durable stainless steel, this robust assembly line ensures operational longevity and meets the rigorous demands of industrial packaging workflows.

## Technical Specifications

### System Components

- Multi-nozzle liquid filling station
- Sealing and capping station
- Automated labeling station
- Conveyor system
- Control panel
- Safety enclosures

### Construction Material

Stainless Steel

### Model Identifiers

QSG-16, GFP-12, FBZ-1

## Operational Capabilities

### Production Scale

High-Volume • Automated
