Product Overview

High-Efficiency Filling for HPC Products

This automated filling system is engineered to address the complex challenges of packaging daily chemical products, including detergents, shampoos, and conditioners. It effectively manages irregular container shapes and difficult liquid properties like foaming, stringing, and dripping. Designed for rigorous hygienic standards and high-volume production, this equipment streamlines operations while ensuring precise filling accuracy.

Technical Capabilities

Suitable Products	Laundry Detergent, Dish Washing Detergent, Shampoo, Conditioner, Fabric Softener, Mouthwash, Creams, Gels
Control System	Programmable Logic Controller (PLC)

Construction & Safety

Safety Features

- Emergency stop buttons
- Safety interlocks
- Enclosed filling areas

Build Material	Stainless Steel
-----------------------	-----------------

Operational Features

Design Advantages

Modular Design • High-Speed Production • Adjustable Nozzles • Easy Maintenance
