

Automated Longitudinal Seam Welding Machine

This automated welding machine is designed for longitudinal seam welding. It features a programmable control system, automated welding head positioning, and a robust frame with integrated workpiece clamping mechanisms.

Overview

Automated Longitudinal Seam Welding Solution

This automated longitudinal seam welding machine is engineered for high-precision welding of both cylindrical and rectangular components. It features a sophisticated programmable control system and automated welding head positioning to ensure consistent, high-quality results. The robust frame design includes integrated workpiece clamping mechanisms, providing stability and reliability for demanding industrial welding applications.

Technical Specifications

Welding Capabilities

- Automated welding head positioning
- Programmable control system
- Integrated workpiece clamping
- Longitudinal seam welding

Component Compatibility

- Cylindrical components
- Rectangular components

Available Models

RC-1000-II, RC-2000-II, RC-3000-II
