

Automated Multi-Head Drip Painting Machine

This automated machine is designed for applying coatings with accuracy and consistency. It features multiple dispensing heads for simultaneous multi-color applications and a programmable control system.

Overview

High-Precision Automated Coating Solution

The Automated Multi-Head Drip Painting Machine is engineered for industrial applications requiring high accuracy and consistency in coating processes. Featuring multiple dispensing heads, it allows for simultaneous multi-color or multi-component applications, significantly increasing production efficiency. Its programmable control system ensures precise management of dispensing parameters, movement, and timing for repeatable, high-quality results.

Technical Capabilities

Dispensing System

- Multiple dispensing heads for simultaneous application
- Programmable control system for precise movement
- Adjustable dispensing parameters and timing
- Multi-color or multi-component capability

Operation & Control

Automation Level

Fully Automated • Programmable • High Precision

User Interface

User-friendly interface for easy programming and process monitoring

Reliability

Maintenance & Reliability

- Designed for minimal maintenance
- Built for demanding production environments
- Reliable long-term operation

Product Identification

Model Number

DS5555-A
