

Automated Multi-Head Paint Dispensing Machine

This automated machine is designed for applying paint or coatings to various substrates. It features multiple dispensing heads for simultaneous multi-color application and a programmable control system for precise dispensing patterns.

Overview

High-Precision Automated Coating Solution

This automated multi-head paint dispensing machine is engineered for high-precision application of paint and coatings across various substrates. It features a programmable control system that allows for intricate dispensing patterns, ensuring accuracy and repeatability in industrial environments. The robust frame design provides maximum stability during high-speed operations, making it an ideal choice for professional coating processes.

Performance

Dispensing System

1 System

Multi-Head Configuration

Technical Features

Key Capabilities

- Simultaneous multi-color application
- Programmable dispensing patterns
- High-precision drip control
- Repeatable coating processes

Construction

Frame Construction

Robust heavy-duty frame for operational stability

Identification

Model Reference

DS555-A

Applications

Industrial Suitability

Industrial Coating, Automated Manufacturing, Precision Dispensing
