

Automated Nut and Bolt Production Machine

This automated machine is designed for the production of nuts and bolts. It features a multi-stage process involving feeding, forming, threading, and cutting.

Product Overview

High-Efficiency Production Solution

This automated machine is designed specifically for the high-volume production of nuts and bolts in industrial settings. It features a streamlined, multi-stage process that seamlessly integrates material feeding, precision forming, threading, and cutting. Built with a robust steel frame and advanced control systems, it ensures consistent output and reliable operation for demanding manufacturing environments.

Technical Specifications

Production Stages

- Raw material feeding
- Forming station
- Threading unit
- Cutting station

Build Quality

Robust Steel Frame, Industrial Grade, Automated Control Systems

Primary Application

High-volume production of nuts and bolts
