

Automated Parts Washing Machine

This industrial cleaning machine automates parts washing and surface preparation. It features a multi-stage process with enclosed tanks and a robust steel frame.

Overview

Industrial Automated Cleaning Solution

This automated parts washing machine is engineered for high-efficiency surface preparation and component cleaning. Featuring a robust steel frame construction and an advanced multi-stage processing system, it is designed to handle rigorous industrial degreasing and cleaning tasks. The integrated overhead conveyor system ensures seamless workflow integration, making it an ideal choice for facilities requiring consistent, high-quality surface treatment.

Technical Specifications

Key System Features

- Enclosed tanks
- Overhead conveyor system
- Automated operation

Construction Material	Robust Steel Frame
Cleaning Process	Multi-stage process, Automated washing, Degreasing, Surface preparation

Application

Suitable Applications

Industrial Cleaning • Component Degreasing • Surface Treatment
