

Automated Plastic Bag Making Machine

This automated system produces plastic bags and similar plastic products. The machine is designed for high-volume production, featuring a complex arrangement of rollers, cutting mechanisms, and folding apparatuses.

Overview

High-Efficiency Automated Bag Production

The SHXJ-A600 is an advanced, automated machine engineered for high-volume plastic bag manufacturing. Featuring a robust design with integrated feeding, processing, and stacking units, it ensures streamlined production and material handling. This system is optimized for reliability and consistent output in industrial environments.

Technical Specifications

Automation Level

Fully Automated

System Components

- Material Feeding Unit
- Central Processing Section
- Cutting Mechanism
- Folding Apparatus
- Collection and Stacking Unit
