

Automated Plastic Bag Making Machine

This high-speed machine automates the production of plastic bags with sealing, cutting, and stacking capabilities. It is designed for manufacturing various bag types, including flat, t-shirt, and garbage bags.

Overview

High-Performance Automated Bag Production

This high-speed automated packaging machine is engineered for the efficient, large-scale production of various plastic bag types. It integrates advanced automation for sealing, cutting, and stacking to streamline manufacturing workflows. Built with durable materials, the system is designed to provide long-lasting performance with minimal maintenance requirements in high-volume environments.

Technical Capabilities

Key Automation Features

- Automatic sealing
- Automatic cutting
- Automatic stacking

Compatible Bag Types

Flat bags, T-shirt bags, Garbage bags

Control & Operation

Adjustable Parameters

- Bag length
- Bag width
- Sealing temperature

Control System

User-friendly control panel

Construction

Build Quality

Durable construction • Low maintenance

Application

Production Suitability

High-volume production environments
