

Automated Potato Planting Machine

This potato planting machine is designed for efficient and precise planting. It features adjustable row spacing and depth control, ensuring optimal seed placement and emergence.

Product Overview

Precision Planting Technology

This robust automated potato planting machine is engineered for high-efficiency and precise crop placement. It features advanced planting units with individual hoppers, allowing for consistent seed distribution across various soil types and field conditions. With integrated depth control and adjustable row spacing, the machine ensures optimal seed placement and uniform emergence, making it an essential tool for professional agricultural operations.

Technical Features

Core Planting Components

- Multiple planting units with individual hoppers
- Adjustable row spacing
- Precision depth control
- Disc openers for furrow creation
- Press wheels for soil compaction

Field Suitability

Various soil types, Diverse field conditions
