

Automated Stainless Steel Ball Valve

This three-piece ball valve includes an automated actuator for remote operation. Constructed from stainless steel, the valve is designed for durability and corrosion resistance in demanding industrial applications.

Product Overview

Industrial Automated Ball Valve

This three-piece ball valve is engineered for high-performance industrial applications requiring precise fluid control. Constructed from durable stainless steel, it offers exceptional corrosion resistance and reliability in demanding high-pressure and high-temperature environments. The integrated automated actuator allows for seamless remote operation, ensuring efficient flow management with minimal maintenance requirements.

Technical Specifications

Material

Stainless Steel

Valve Construction

Three-piece ball valve

Actuation Method

Automated actuator

Mounting System

Direct-mount

Key Features

Primary Benefits

- Corrosion resistance
- High-pressure capability
- High-temperature tolerance
- Remote operation capability
- Minimal maintenance
