

Automated Stick Ice Lolly Machine

This automated machine produces stick-type ice lollies. Different shapes of products can be made by changing the molds.

Product Overview

Automated High-Capacity Lolly Production

This fully automatic stick ice lolly machine is engineered for high-volume commercial production environments. It features a streamlined, multi-stage process covering filling, freezing, stick insertion, extraction, and wrapping. Designed with durable stainless steel, it ensures high hygiene standards and long-term reliability for industrial food processing needs.

Technical Specifications

Construction Material

Stainless Steel

Key Operational Processes

- Filling
- Freezing
- Stick insertion
- Extraction
- Wrapping

Automation Level

Fully automatic

Control System

Programmable Logic Controller (PLC)

Mold Flexibility

Yes
