

Automated Wire Cutting and Stripping Machine

This high-precision machine is designed for cutting and stripping a variety of wire types and sizes. It features automated feeding, cutting, and stripping functions for consistent results.

Product Overview

High-Precision Wire Processing

The ZDBX-10 is a high-precision wire stripping and cutting machine designed for processing a variety of wire types and sizes. It features automated feeding, cutting, and stripping functions, ensuring consistent and accurate results for diverse production environments. Engineered for efficiency and reliability, this machine helps increase productivity while reducing operational costs through its robust construction and user-friendly interface.

Technical Specifications

Adjustable Parameters

- Stripping length
- Cutting length
- Wire diameter

Capabilities

Automated Feeding, Automated Cutting, Automated Stripping

Operational Metrics

Application Suitability

Small-batch production • Large-scale production
