

Automatic Air Vent Valve for HVAC Systems

Automatic air vent valves remove trapped air in heating and cooling systems. They feature a compact design, threaded connections, and a manual shut-off valve for maintenance in hydronic, solar thermal, and closed-loop water systems.

Product Overview

High-Efficiency Air Ventilation

This automatic air vent valve is engineered to eliminate trapped air from heating and cooling systems, ensuring optimal hydraulic performance. By effectively preventing airlocks, the valve helps maintain consistent circulation and improves overall system energy efficiency. Its robust construction and manual shut-off feature make it a reliable choice for long-term maintenance in closed-loop water environments.

Technical Specifications

Suitable Applications

- Hydronic heating systems
- Solar thermal systems
- Closed-loop water systems

Construction Materials	Brass, Stainless Steel
Maintenance	Yes
Connection Type	Threaded
