

Automatic Battery Charger for Automotive Applications

This is a fully automatic battery charger designed for various battery types. It features multiple charging modes and is suitable for automotive and similar applications.

Overview

Professional Automotive Battery Charging

The START 55 is a fully automatic battery charger engineered for reliable performance in automotive environments. Utilizing an advanced microprocessor system, it ensures precise charging cycles for various battery types. With built-in safety features like overcharge and short circuit protection, this unit provides a secure and efficient solution for professional maintenance needs.

Performance & Safety

Key Performance Metrics

55 START
Model Series

Safety Features

Automatic Voltage Detection, Overcharge Protection, Short Circuit Protection

Technical Specifications

Application Suitability

Automotive

Charging System

Fully Automatic Microprocessor System

Connection Hardware

Heavy-duty clamps
