

Automatic Beverage Bottling Machine

This machine is designed for rinsing, filling, and capping bottles of mineral water and other beverages. It automates the entire bottling process to increase efficiency.

Overview

High-Efficiency Bottling Solution

This fully automatic bottling machine is engineered for high-volume production lines handling beer, wine, water, and various beverages. Constructed from durable stainless steel, it ensures optimal hygiene standards and long-term reliability in demanding industrial environments. The system streamlines your workflow by automating critical stages including filling, capping, and labeling, significantly reducing labor requirements while maintaining precise filling accuracy.

Technical Specifications

Integrated Functions

- Filling
- Capping
- Labeling

Material Construction	SUS 304 Stainless Steel
Automation Level	Full Automatic
Compatible Liquids	Beer, Wine, Water, General Beverages

Compliance & Standards

Certifications

CE • ISO 9001 • UL
