

Automatic Bottled Water Filling Machine

This machine integrates washing, filling, and capping into one unit, and can be used for different kinds of fruit juices and tea hot drink production. With only a few parts changed, the machine can also be used for mineral water filling.

Product Overview

Integrated Filling Solution

This automated unit seamlessly integrates washing, filling, and capping processes into a single streamlined operation. Engineered with advanced micro-negative pressure technology, it ensures filling is quick, steady, and exceptionally accurate for various beverage types. The integrated beverage feedback system prevents secondary pollution and oxidation by separating gas feedback from the liquid stream, ensuring high product integrity.

Operational Specifications

Process Integration

- Washing
- Filling
- Capping

Applications

Fruit Juices, Hot Tea, Mineral Water, Beverage Production

Filling Technology

Micro-negative pressure filling

Technical Details

Key Features

- Adjustable filling nozzles
- Beverage feedback system
- Centralized control panel

Filling Heads

12

Build Quality

Stainless steel construction for hygiene and durability
