

Automatic Bottom Sealing Plastic Bag Maker

This fully automatic bottom sealing bag making machine is designed for efficient plastic bag production. The machine integrates film feeding, sealing, cutting, and conveying processes with precision control systems to ensure consistent bag dimensions and sealing quality.

Overview

High-Efficiency Production

This fully automatic bottom sealing bag making machine is engineered for the high-speed, consistent production of plastic bags. It seamlessly integrates film feeding, precision sealing, cutting, and conveying into a single streamlined process. Designed with a robust mechanical structure and advanced control systems, it ensures uniform bag dimensions and superior sealing quality for various industrial applications.

Technical Capabilities

Automation Level

Fully Automatic

Integrated Processes

- Film Feeding
- Bottom Sealing
- Cutting
- Conveying

Control System

Precision Control, Adjustable Parameters

Operational Parameters

Adjustable Parameters

- Bag Length
- Bag Width
- Film Thickness
