

Automatic Circular Welding Machine

The automatic welding machine is designed for circular welding applications. It features a robust structure with a central column and a rotating platform for precise workpiece positioning.

Overview

Professional Circular Welding Solution

The PPAW05 automatic welding machine is engineered for precision circular welding applications in industrial environments. It features a robust central column and a specialized rotating platform that ensures consistent positioning for cylindrical and circular components. This integrated system combines an automated welding head with a dedicated power source to deliver high-quality, repeatable weld results across diverse manufacturing sectors.

Technical Specifications

System Components

- Central column structure
- Automated rotating platform
- Integrated welding power source
- Advanced control panel
- Automated welding head

Model Name	PPAW05
Supported Geometries	Cylindrical, Circular
