

Automatic Circular Welding Machine

The automatic welding machine is designed for efficient and precise circular welding applications. It is constructed with a central column supporting a welding head and a rotary table for positioning workpieces.

Overview

Precision Circular Welding Solution

The PPAW05 automatic welding machine is engineered for high-efficiency, precise circular welding applications. It features a robust, stable design with an integrated rotary table for accurate workpiece positioning and a dedicated control panel for fine-tuning welding parameters. This versatile system ensures consistent, high-quality weld seams across various circular components and includes a built-in power source for immediate operation.

Technical Specifications

Model	PPAW05
Welding Application	Circular Welding

Design & Construction

Key Components

- Central column
- Welding head
- Rotary table
- Control panel
- Welding power source

Mobility	Yes
Mobility Features	Stable base, Wheels for mobility
