Product Overview

High-Efficiency Concrete Block Production

This mobile concrete block making machine is engineered for economical mass production of high-quality concrete elements, including hollow blocks, solid blocks, foundation blocks, and chimney blocks. It features a proven, robust design suitable for both open areas and indoor facilities, ensuring reliable operation for decades. With interchangeable moulds and advanced hydraulic systems, it offers exceptional flexibility to meet diverse market demands.

Operational Capabilities

Control Features

- Manual directional control valve
- Automatic control panel with visual screen
- Frequency control system for motor
- Accurate pressure control

Operation Modes

Manual Operation, Fully Automatic

Design & Performance

Mobility & Handling

- Mobile design for open area or building use
- Vulkollan-coated running wheels for floor protection
- Hydraulic shunting wheel for end-of-line turning
- Fast and gentle travel via electric drive

Performance Highlights

6000 +

Units in Global Operation

Safety & Maintenance

Safety Systems

- Quick assembly safety gate with retractable springs
- Strong locking mechanism
- Easy access for mould cleaning and maintenance
