

# Automatic Continuous Degaussing Equipment

The automatic continuous degaussing equipment is designed for large-scale magnetic media destruction. It can process up to 800 magnetic hard disks per hour with effective demagnetization.

## Product Overview

### Industrial Magnetic Media Destruction

The XBC-LX800 is a high-performance automatic continuous degaussing system designed for large-scale destruction of magnetic media. With a throughput capacity of up to 800 units per hour, it offers professional-grade reliability for industrial and secure disposal environments. The system is engineered for stability, long service life, and simple maintenance, ensuring consistent operation for demanding production lines.

## Performance Metrics

### Throughput Capacity

**800 units/h**

Processing Capacity

### Magnetic Field Strength

- Minimum: 8500 Oe
- Maximum Configurable: 16000 Oe

## Operational Details

### Maintenance & Reliability

High Stability • Long Life • Simple Maintenance

### Operation Mode

Automatic, Continuous
