

Automatic Corn Curl Snack Production Line

This automatic production line efficiently produces crunchy corn curl snacks. The system integrates mixing, extrusion, frying, and seasoning to ensure consistent product quality and high output.

ADDITIONAL IMAGES

Overview

The final output: crispy, extruded corn snacks ready for packaging.

High-Efficiency Production Line

This automatic production line is designed for the continuous manufacturing of crunchy, extruded corn snacks like Kurkure, Cheetos, and Nik Naks. The system manages the entire process from raw material preparation to final seasoning, ensuring consistent quality and high output. Engineered with food-grade stainless steel, this line offers a hygienic, automated solution for large-scale snack processing facilities.

Technical Details

Durable, stainless steel construction ensures hygiene and long-lasting performance in food processing environments.

Supported Voltages

- 380V/50Hz (Three Phase)
- 220V/50Hz (Single Phase)
- Customizable to local voltage

Raw Materials

Corn Grits, Wheat Flour

Construction Material

Stainless Steel

Process Flow

A comprehensive view of the integrated production line, including mixing, extrusion, frying, and seasoning units.

Production Stages

- Mixing
- Extrusion
- Frying
- Cooling
- Seasoning

Automation Features

PLC Control • Adjustable Speed • Automated Seasoning • Continuous Operation
