

Automatic Cutting and Sewing Machine for Bag Production

This automatic cutting and sewing machine integrates multiple stages of processing, including unwinding, cutting, folding, and sewing. It is equipped with rollers, guides, and a conveyor system to ensure smooth material handling for manufacturing various types of bags and packaging materials.

Overview

High-Efficiency Bag Production

This automatic cutting and sewing machine is engineered for streamlined, high-volume bag manufacturing. It seamlessly integrates multiple production stages, including material unwinding, precision cutting, folding, and sewing into a single cohesive workflow. Designed with a robust conveyor system and advanced material handling guides, it ensures consistent output and reliability for various packaging applications.

Technical Specifications

Integrated Processes

- Material Unwinding
- Precision Cutting
- Folding
- Sewing

Key Components

Conveyor System, Material Guides, Robust Rollers, Integrated Automation

Color Scheme

Blue and Beige
