Product Overview

High-Efficiency Peripheral Water Pump

This automatic peripheral water pump is designed for reliable domestic water supply and pressure boosting applications. It utilizes a radial blade impeller to generate high pressure through centrifugal motion, ensuring efficient performance in a compact form factor. Built with a durable iron pump body and aluminum motor housing, this unit is engineered for longevity and cost-effective operation.

Technical Specifications

Power Rating

0.4 HP

Horsepower

300 W

Power Output

Material Composition

Component	Material
Pump Body	Iron
Impeller	Brass
Motor Housing	Aluminum

Features

Core Features

Automatic Operation, Peripheral Impeller, Compact Size, High Pressure Generation, Thermally Protected

Applications

Recommended Uses

- Domestic water supply
- Pressure boosting systems
- Garden irrigation
- Light commercial water transfer
