

# Automatic Facial Tissue Converting Machine

This machine produces facial tissues with an 800/840mm parent roll width. It utilizes a round knife consecutive slit system for efficient converting.

## Product Overview

### High-Performance Tissue Manufacturing

This automatic facial tissue converting machine is engineered for high-volume production environments requiring precision and reliability. It features advanced automation for folding, cutting, and counting, ensuring seamless operation with minimal downtime. Built with durable materials and comprehensive safety systems, this equipment is designed to produce consistent, high-quality tissue products in various sizes and fold patterns.

## Key Features

### Automation Functions

- Automatic folding
- Automatic cutting
- Automatic counting

### Safety Compliance

Emergency Stop, Protective Guarding

## Performance Metrics

### Operational Speed

High-speed

### Production Capabilities

- Variable tissue sizes
- Multiple fold patterns

## Technical Specifications

### Construction

Durable industrial-grade materials

### Control System

Advanced integrated control system
