

Automatic Fly-Piece Attachment Unit

The automatic fly-piece attachment unit is designed for apparel and textile manufacturing. This machinery automates the fly-piece attachment process, improving production efficiency and precision.

Product Overview

Automatic Fly-Piece Attachment Unit

This automatic fly-piece attachment unit is designed to streamline apparel and textile manufacturing processes. Featuring a micro-computer control panel and an intuitive LCD touch operation system, it allows operators to easily program and store fabric shape data for consistent, high-volume production. The machine is engineered for durability with a robust mechanical design, incorporating specialized metal and rubber anti-slippery modules to ensure precise cloth transmission.

Control & Operation

Control Interface	Micro-computer panel with LCD touch operation system
Programmable Features	Yes

Mechanical Design

Transmission Components	Metal module, Rubber anti-slippery module
-------------------------	---

Application

Primary Application

Apparel Manufacturing • Textile Industry • Fly-piece Attachment

Performance

Key Operational Benefits

- Automated fly-piece attachment
- Programmable shape data storage
- Reduced manual labor
- Improved production consistency
