

Automatic Garment Dry Cleaning Machine

This automatic dry cleaning machine is designed for efficient and reliable garment care. It features robust construction, an advanced solvent recovery system, and user-friendly controls for optimal cleaning results.

Product Overview

Professional Garment Care

This automatic dry cleaning machine is designed for high-efficiency garment maintenance, ensuring clothes remain wrinkle-free, color-fast, and flexible after cleaning. Featuring a fully computerized control system, the machine automates fluid addition, circulation, filtration, drainage, and drying processes for precise results. Its robust stainless-steel construction and advanced solvent recovery system make it a reliable and cost-effective solution for professional laundry environments.

Technical Features

Control System	Full computer automatic control with manual override
Filtration	Yes
Solvent Recovery	Two-way in-vitro activated carbon recycling
Motor Speed Control	Frequency control

Safety & Protection

Safety Mechanisms

- Automatic fault monitoring
- Safety interlock
- Overload protection device
- Pneumatic valve control

Construction

Key Components	High-quality stainless steel cylinder, Pneumatic valves, Activated carbon filters
