

Automatic Heat Shrink Film Wrapping Machine

This automatic heat shrink film wrapping machine is PLC controlled for easy operation. It uses thermostatic aluminum alloy sealing blades and precise temperature control to wrap beverage, food, and medicine products.

Overview

Professional Packaging Solution

This automatic heat shrink film wrapping machine is designed for versatile packaging across beverage, food, medicine, and chemical industries. It offers flexible regulation for various packaging shapes including square, round, and flat items, ensuring high-quality visual presentation. Built with durable stainless steel and carbon steel, the machine features advanced electrical control and adjustable hot air circulation for reliable, energy-saving performance.

Technical Specifications

Conveyor Height Adjustment	50 mm
Control System	PLC with Touch Screen
Heating System	Pterygoid stainless iron

Key Features

Operational Capabilities

- Frequency control
- Secondary bottle transport device
- Pneumatic push-bottle and sealing structure
- Inductive film length control
- Strong cooling system for rapid design finalization
- Heat-fast Teflon transport net

Suitable Industries	Beverage, Food, Medicine, Chemical
---------------------	------------------------------------
