Overview

High-Efficiency Laminating Solution

This automatic high-speed flute laminating machine is engineered for precision and productivity in corrugated cardboard processing. It utilizes advanced PLC tracking technology and specialized front-location mechanisms to ensure high-accuracy alignment and stable operation. Designed for demanding industrial environments, the system features a pre-stacking device and a rotary telescopic bottom paper feeder to handle warped boards efficiently, significantly reducing downtime.

Operational Features

Efficiency Features

- Pre-stacking device
- Special front location mechanism
- Rotary telescopic bottom paper frame
- Automatic parameter adjustment

Feeding Style	Overlapping feeding style
