

Automatic Hot Beverage Filling, Rinsing, and Capping Machine

This comprehensive machine integrates rinsing, filling, and capping functions for hot beverages. The system combines rinsing heads, filling nozzles, and capping heads into a single, efficient unit.

Overview

Integrated Hot Beverage Processing System

This comprehensive machine is engineered for the efficient processing of fruit juices and other hot beverages. It features an integrated design that combines rinsing, filling, and capping operations into a single, streamlined unit. Designed for high-volume production environments, this system ensures precise filling accuracy and secure capping to maintain rigorous hygiene and product quality standards.

Technical Configuration

Rinsing Heads	32
Filling Nozzles	32
Capping Heads	10

Performance

System Type

3-in-1 Monoblock • Automatic

Model Number

RCGF32-32-10

Application

Suitable Products

Fruit Juice, Hot Beverages
