

Automatic Industrial Sewing Unit

This automatic sewing unit is designed for efficient and precise stitching in apparel and textile manufacturing. It features automated functions to streamline the sewing process, increase productivity, and ensure consistent quality.

Overview

High-Performance Industrial Sewing

The TC129 is a high-performance industrial sewing unit engineered for precision and efficiency in textile and apparel manufacturing. Designed for demanding production environments, it features robust construction for long-term reliability and consistent output. The unit streamlines operations with advanced automated functions, making it a versatile solution for various fabrics and sewing applications.

Key Features

Performance Metrics

129

Model Series

Automated Capabilities

Programmable stitch patterns, Automated thread trimming, Adjustable speed settings

Operational Details

Suitable Applications

- Apparel manufacturing
- Textile production
- Professional sewing operations
