

Automatic Liquid Filling and Capping Machine

This automatic bottling machine is designed for filling and capping various liquid products. It features adjustable settings for different bottle sizes and fill volumes.

Overview

High-Efficiency Liquid Processing

This automatic bottling solution is engineered for high-speed filling and capping of diverse liquid products. Featuring a robust stainless steel frame and integrated safety enclosures, it ensures both durability and operator protection. With advanced PLC control and adjustable settings, it delivers precise performance for beverage, pharmaceutical, and cosmetic applications.

Technical Specifications

Build Material

Stainless Steel

Filling System

Multi-head automatic filling

Capping System

Rotary capping mechanism

Control Interface

Programmable Logic Controller (PLC)

Features & Safety

Safety Equipment

Safety Interlocks, Emergency Stop, Transparent Safety Enclosures

Maintenance

Designed for easy cleaning and maintenance

Applications

Suitable Industries

- Beverage
- Pharmaceutical
- Cosmetic
