

Automatic Luggage Stretch Wrapping Machine

This automatic baggage wrapping machine efficiently and securely wraps luggage and other items with stretch film. It features a rotating platform, adjustable tension control, and a user-friendly control panel.

Overview

Professional Airport Luggage Protection

The LP600 Automatic Luggage Wrapping Machine is a specialized solution designed to secure baggage and parcels in airport and logistics environments. By applying 3 to 5 layers of stretch film, it provides essential protection against damage during transit and acts as a significant theft deterrent. The system is mobile and easy to operate, ensuring that wrapped items are easily identifiable and tamper-evident for professional security standards.

Technical Specifications

Technical Data Summary

Parameter	Value
Model	LP600
Turntable Speed	20 RPM
Max Load	100kg
Efficiency	20-40 loads/hour
Pre-stretch Rate	Up to 250%
Power Supply	AC 220V
Pre-Stretch Capability	250 %
Standard Wrapping Layers	3 to 5 layers

Operational Features

Core Features

- Movable rotary turntable device
- Manually operated vertical rods for size adjustment
- User-friendly control panel with start button
- Integrated film cutting process
- Powered pre-stretch system for film economy

Key Benefits

Theft Prevention • Damage Protection • Easy Identification • Film Consumption Optimization • Durable Construction
