

Automatic Noodle Production Machine

This automatic machine produces noodles for commercial applications. It creates round, flat, and sliced noodles through interchangeable cutting mechanisms.

Product Overview

High-Efficiency Commercial Noodle Production

This automatic noodle production machine is engineered for consistent, high-volume manufacturing of various noodle types, including round, flat, and sliced varieties. Featuring a robust design with a 5-group roller system, it ensures uniform dough sheeting and precise cutting for professional food processing environments. The machine is built for durability and continuous operation, making it an ideal solution for restaurants and industrial noodle production facilities.

Model Comparison

Specification	FDKH5-250	FDKH5-300
Roller Size	13.8*25cm	13.8*30cm
Capacity	220kg/h	240kg/h
Weight	550kg	650kg
Dimensions	1500*650*1370mm	1500*750*1370mm

Supported Noodle Types	Round, Flat, Sliced
------------------------	---------------------

Electrical & Operational

Voltage & Frequency	220v/380v, 50hz
Roller System	5 groups
