

Automatic Pallet Stretch Wrapping Machine

This automatic stretch wrapping machine is designed for palletized loads. It utilizes a rotating turntable and a vertically moving film carriage to securely wrap the load.

Overview

Industrial Pallet Wrapping Solution

This automatic stretch wrapping machine is engineered for high-efficiency palletized load stabilization. It features a robust steel frame construction and a dynamic rotating turntable system designed to handle various pallet sizes. The integrated vertical film carriage ensures consistent load integrity, while adjustable tension controls optimize film usage for cost-effective and secure packaging operations.

Technical Specifications

Machine Type	Automatic Pallet Stretch Wrapping Machine
Frame Material	Robust Steel

Operational Features

Wrapping Mechanism

- Rotating turntable for load placement
- Vertical film carriage movement
- Adjustable tension controls

Key Operational Benefits	Load Stability, Optimized Film Usage, Automatic Operation, Versatile Pallet Handling
