

Automatic Plastic Bag Making Machine

This high-speed automatic plastic bag making machine produces various types of plastic bags. It features advanced servo motor control for precise and efficient operation, with multiple unwinding stations, sealing and cutting units, and a conveyor system.

Overview

High-Performance Bag Production

This high-speed automatic plastic bag making machine is engineered for precision and efficiency in high-volume manufacturing environments. Featuring advanced servo motor control, it ensures consistent operation and reliable output for various bag types. Its robust construction provides the stability necessary for continuous, heavy-duty production cycles.

Technical Capabilities

Key Components

- Multiple Unwinding Stations
- Precision Sealing Units
- Precision Cutting Units
- Automated Conveyor System

Compatible Bag Types

Flat Bags, T-shirt Bags, Customized Bags

Control System

Advanced Servo Motor Control

Performance Metrics

Operational Mode

Automatic • High-Speed
