

Automatic Plastic Cup Forming Machine

This automatic machine is designed for efficiently forming plastic cups. It features precise temperature control, automated material feeding, and a user-friendly control panel.

Product Overview

High-Efficiency Cup Production

This high-speed automatic cup making machine is engineered for the efficient, large-scale production of plastic cups. It features a robust frame and precise temperature control systems to ensure consistent quality across various cup sizes and shapes. With automated material feeding and forming processes, it provides high output and reliable performance for demanding manufacturing environments.

Technical Features

Automation Capabilities

- Automated material feeding
- Automated forming process
- Precise temperature control
- User-friendly control interface

Adjustable Parameters

Heating time, Cooling time, Mold pressure

Performance Metrics

Key Performance Indicators

1 Automatic
