

Automatic Plastic Thermoforming Machine

This automatic plastic thermoforming machine is designed for efficient plastic container and packaging production. It features automated material feeding, heating, forming, cutting, and stacking processes, controlled by a PLC.

Product Overview

High-Efficiency Thermoforming Solution

This automatic plastic thermoforming machine is engineered for the high-speed production of plastic containers, including cups, trays, and lids. It integrates automated material feeding, heating, forming, cutting, and stacking into a single streamlined process. Built with a programmable logic controller (PLC), it ensures precise control and consistent monitoring for demanding manufacturing environments.

Technical Specifications

Automation Capabilities

- Automated material feeding
- Automated heating
- Automated forming
- Automated cutting
- Automated stacking

Control System

PLC Controlled • Automated Monitoring

Model Identifier

FSC-350

Applications

Typical Output Products

Plastic Cups, Plastic Trays, Plastic Lids, Packaging Containers
